EDUCATION

K.J. Somaiya College of Engineering

B.Tech in Computer Engineering with Honours in Data Science Analytics - **9.16 CGPA**

Mumbai, Maharashtra

Aug 2020 – May 2024

EXPERIENCE

Gupshup

Mumbai, India

Software Development Engineer II (Promoted from SDE I)

Jul 2024 – Present

- Promoted to **Software Development Engineer II** after taking end-to-end ownership of the **Partner Platform** as the sole engineer, leading architecture, feature development, production operations, and partner integrations while leveraging an **AI-first development approach** to reduce engineering turnaround time by **50%+**.
- Built an **AI-powered developer workflow** combining knowledge graphs, planner agents, code generation, and automated test creation to execute end-to-end software development tasks while reducing LLM token consumption and improving engineering productivity.
- Architected the backend powering partner onboarding, real-time campaign analytics, delivery tracking, and performance reporting across systems processing **500M+ messages daily**, enabling data-driven decision making at scale.
- Engineered scalable backend systems in **Java** and **Go** for high-throughput message transformation and delivery across distributed services, maintaining **99.99% uptime**.
- Designed a modular transformer architecture supporting **10+ payload formats and protocols**, enabling seamless enterprise partner integrations while reducing onboarding effort.
- Implemented resilient event-driven workflows using **Kafka**, pub/sub, retries, and DLQs, improving delivery success rates by **30%** while increasing fault tolerance under peak load.
- Optimized high-throughput data systems across **PostgreSQL, MySQL, and Elasticsearch**, ensuring efficient querying, storage, and real-time analytics performance.
- Led production deployments on **AWS** and **Kubernetes** using Helm, health probes, dynamic logging, Coralogix, Splunk, CI/CD pipelines, and automated testing frameworks, accelerating release cycles by **4x**.
- Resolved critical undocumented production issues through reverse engineering, log analysis, and developer tooling improvements, restoring reporting accuracy within 24 hours while reducing developer onboarding time by **4x**.

Utopia Tech

Mumbai, India

Backend Developer

Jan 2024 – May 2024

- Developed backend systems, REST APIs, and database schemas for an IoT platform, enabling real-time monitoring and health tracking for **1000+ connected devices** through operational dashboards.

Caarya

Remote

Backend Developer

May 2022 – Nov 2022

- Created and deployed **Discord bots and RESTful APIs** supporting multiple startup web and mobile applications, automating operational workflows and reducing manual effort.

PROJECTS

QueueFree | Founder - Go, Next.js, React Native, Scalable Systems

- Founded and developed a **multi-tenant, end-to-end queue management platform** coordinating customers, kitchen staff, and managers in real time.
- Engineered **concurrent Go services** for queue scheduling, order lifecycle management, and event-driven updates, supporting **10,000+ active users** and increasing traffic.

Real-Time Bus Tracking Application | Spring Boot, PostgreSQL, WebSockets

- Built a **real-time bus tracking system** using REST APIs and WebSockets, delivering GPS location updates to connected clients in **under 1 second** with minimal latency.
- Modeled and normalized PostgreSQL schemas for buses, routes, drivers, and time-series location logs, supporting efficient storage and querying of **100,000+ GPS location records**.

TECHNICAL SKILLS

Languages: C++, Java, Go, Python, SQL, JavaScript, HTML, Bash

Frameworks & Libraries: Spring Boot, Flask, Django, FastAPI, Celery, Scrappy, Playwright, Node.js, Express.js, Hapi.js, React

Development Areas: REST APIs, WebSockets, Microservices, Message Queues, Event-driven Architecture, Data Pipelines, Async Processing, Multithreading, CI/CD

Databases & Queues: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch; RabbitMQ, Apache Kafka

Cloud & DevOps: AWS (EC2, S3), Azure, Docker, Kubernetes, Helm, Nginx, Prefect, Git, Bitbucket, JIRA, Linux

Messaging & Observability: Apache Kafka, RabbitMQ, Coralogix, Splunk, Postman
